

# Logging

Page

## Log4J

*pom.xml*

Setting up the log4j property file

## SLF4J

Logging facade

### Using SLF4J in [Quarkus](#)

The configuring is done in the application.properties

```
# Configuration file
# key = value

# root logger
quarkus.log.level=INFO

# Logger configuration for 'at.html'
quarkus.log.category."at.html".level=DEBUG

quarkus.log.console.level=DEBUG
quarkus.log.console.enable=true
quarkus.log.console.format=%d{HH:mm:ss} %-5p [%c{2.}] (%t) %s%n
```

Defining the logger in our class

```
private static final Logger logger =
    LoggerFactory.getLogger(GuitarEndpoint.class);
```

More information can be found at the [Quarkus Logging](#) site.
